## 1. General Description

The BR550D10 is a Color Active Matrix Liquid Crystal Display with an integral Light Emitting Diode (LED) backlight system. The matrix employs a-Si Thin Film Transistor as the active element.

It is a transmissive type display operating in the normally black mode. This TFT-LCD has a 54.64 inch diagonal measured active display area with WUXGA resolution(1080 vertical by 1920 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes.

Gray scale or the brightness of the sub-pixel color is determined with a 10-bit gray scale signal for each dot,thus, presenting a palette of more than 1.06Bilion colors.

It is intended to support Public Display where high brightness,super wide viewing angle,high color gamut,high color depth and fast response time are important.

#### 4. Optical Specifications

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25 °C. The values specified are measured at an approximate distance 50cm from the LCD surface at a viewing angle 0 °.

[Figure 9] Optical characteristic measurement equipment and method

**Table 6. Optical characteristics**

Parameter	Symbol	Values			Units
		Min	Type	Max	
Contrast ratio	CR	1000	1400	-	
Surface luminance, white	$L_{WH}$	900	1000	-	cd/m2
White luminance uniformity	$\Delta Y$	80	85	-	%
Response time	G to G	-	5.5	-	ms
Color Temperature			10000		K
Color Gamut(NTSC %)			72		%
Viewing angle (by CR >10)	x axis, right( $\phi = 0^\circ$ )	-	89	-	degree
	x axis, left ( $\phi = 180^\circ$ )	-	89	-	
	y axis, up ( $\phi = 90^\circ$ )	-	89	-	
	y axis, down ( $\phi = 270^\circ$ )	-	89	-	

Notes:

1. Contrast Ratio(CR) is defined mathematically as :

$CR = \text{Surface Luminance at all white pixels} / \text{Surface Luminance at all black pixels}$

It is measured at center 1-point.

2. Surface luminance is determined after the unit has been 'ON' and 1 Hour after lighting the backlight in a dark environment at  $25 \pm 2^\circ \text{C}$ . Surface luminance is the luminance value at center 1-point across the LCD surface 50cm from the surface with all pixels displaying L255 white.

3. The White luminance uniformity on LCD surface is then expressed as :

$\Delta Y = (\text{Minimum Luminance of 9 points} / \text{Maximum Luminance of 9 points}) * 100$
